

# Quickoffice ProSelect HD for Good Technology

ProSelect HD and Good Dynamics combine to create secure mobile document editing, handling, and transmission.

## ABOUT QUICKOFFICE®

Looking to offer your employees a mobile office but worried about security and data leakage? Good Technology's partnership with Quickoffice, the global leader in mobile office productivity, allows employees to access their documents and files on the go—while giving you peace of mind. Quickoffice applications are the most widely distributed mobile office software, and the ProSelect™ HD for Good app allows your employees to create, view, and edit Microsoft Word documents, Excel spreadsheets, and PowerPoint files; and view Adobe PDF files; all on their iPads.

ProSelect HD for Good is a custom-built mobile office application specifically designed for use on the iPad, providing functionality and reliability for mobile users. ProSelect HD for Good uses powerful visuals and graphics, making documents and spreadsheets easy to see and use.

## ➔ SECURELY WORK ON CORPORATE DOCUMENTS WHILE ON THE GO

Your mobile workforce is constantly in motion and wants to be able to download and edit documents on the go. You want to help your employees stay mobile and productive while keeping corporate data secure and protected from hackers, data leaks, and data loss. ProSelect HD for Good keeps your employees securely productive.

An employee can open a document in ProSelect HD for Good; edit and save their document; and securely e-mail the updated document to their contacts through Good for Enterprise. (You'll need to provision Good for Enterprise on employee devices to use this functionality.) You won't have to worry about data being exposed through a third party application: All data is secured since cryptography in Good Dynamics is built on a FIPS 140-2 certified crypto library.

## ➔ EASILY MANAGED, SECURELY CONTAINED

With ProSelect HD for Good, you can easily control editing applications through policy-based management. Select the level of control that allows flexibility for your employees and uncompromised security for your corporate data.

It's easy to set secure policies in the Good Control management console, which helps you control your mobile Good Dynamics applications, and keeps your corporate data secure. You can set password requirements, detect jailbroken devices, and prevent cut/copy/paste actions. If necessary, you can remote-wipe data on a lost or stolen device. ProSelect HD for Good includes an extra set of secure design features: Cloud-based sync and file sharing options have been disabled to prevent data loss and data exposure. Now you can offer your employees secure collaboration and connection tools all while keeping your data safe and secure in a mobile world.

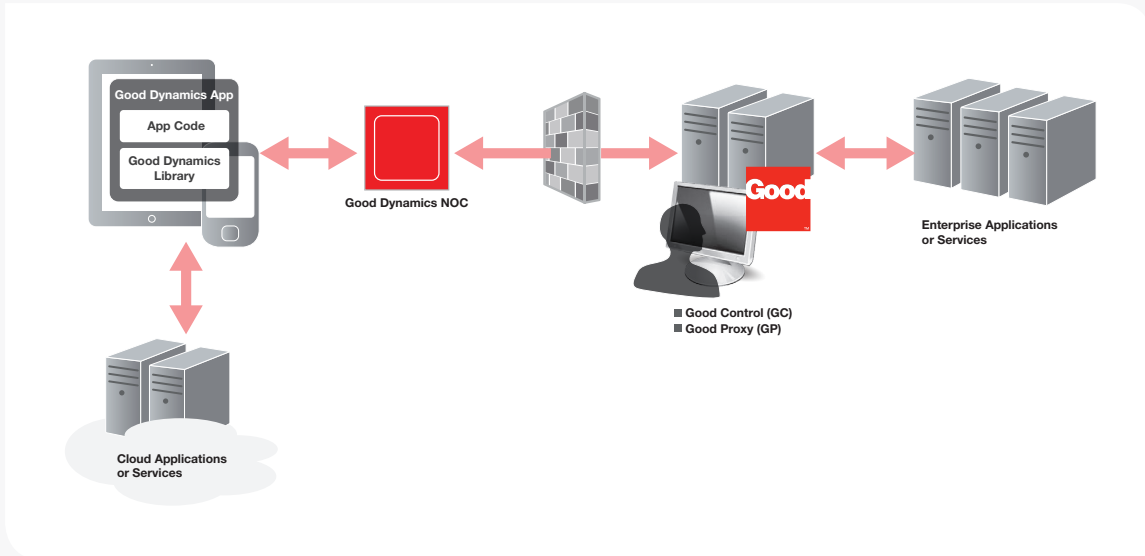

## ➔ SIMPLE PROVISIONING, EASY STARTUP

Once you've provisioned your employees through Good Control, they can download the "ProSelect HD for Good" app from the Apple App Store. ProSelect HD for Good specifically combines Quickoffice's mobility with Good Dynamics' security. ProSelect HD for Good is activated when your employee enters their corporate email and activation code (emailed when you provision your employee). ProSelect HD for Good downloads secure policies you've set up in the Good Dynamics management tool, Good Control; your employee then creates a secure password. It's that easy.

Once provisioned, mobile employees can easily and securely collaborate on documents. You don't have to worry about confidential data leakage exposure. Cloud sharing, social network sharing, and Wifi web browser sharing—among other functions—are all disabled, ensuring that confidential documents and spreadsheets stay within the application. Your mobile employees can send and share files through Good for Enterprise and in the future, all Good Dynamics-secured apps. All local files are encrypted and securely stored.
